

Logan Boswell

loganstuartboswell@gmail.com | (912) 978 2765 | lbos7.github.io | linkedin.com/in/lbos7

EDUCATION

Northwestern University
Master of Science in Robotics

Evanston, IL

Expected: December 2025

Georgia Institute of Technology
Bachelor of Science in Mechanical Engineering (Highest Honors)
Concentration in Automation and Robotics

Atlanta, GA

May 2024

EXPERIENCE

Georgia Tech Research Institute
Student Assistant - Part Time

Smyrna, GA

Jan - May 2024

- Provided mechanical design and rapid prototyping support to various projects involving radar systems
- Designed, machined, and assembled housing, fixtures, and mounts for complex electronic systems

Chick-fil-A Corporate Support Center
Equipment and Systems Engineering Co-Op

Atlanta, GA

Jan 2022 - Aug 2023

- Developed code libraries using Python, C++ , and Git for an automated frying system
- Modeled an electric heater in SolidWorks to meet strict size and watt density specifications
- Created a GUI using Python and PyQt5 to increase ease of operation of automated frying system

PROJECTS

Ping Pong Robot from Scratch (in progress)

Winter 2025

- Designing and building an omnidirectional robot capable for returning ping pong balls to a player
- Developing a ROS2 package in C++ and Python for identifying balls and moving on the table appropriately
- Utilizing the YOLOv8 deep learning model for ping pong ball object detection

7-DOF Pool-Playing Robot

Fall 2024

- Collaborated with a team of 5 to develop a Python ROS2 package for a Franka Panda arm to play a game of pool
- Wrote a Python ROS2 API wrapper to plan and execute trajectories using MoveIt2
- Modeled and printed custom pool cues in Onshape so the robot could more easily grip them

Mobile Manipulation Pick and Place with KUKA youBot

Fall 2024

- Simulated a pick and place task of a youBot by generating a reference trajectory based on modern screw theory
- Implemented a feed forward + PI controller to minimize error between actual trajectory and reference trajectory
- Performed physical simulation using an ODE and displayed system in CoppeliaSim

Line-Following Car from Scratch

Spring 2024

- Led team of 2 to design and build a car capable of following a line or being controlled by an RC remote
- Create a system model in SolidWorks and manufactured custom parts through rapid prototyping
- Implemented a PID controller for following a line and steering via RC remote in LabVIEW

Propeller-Driven Balance Beam from Scratch

Fall 2023

- Worked with team of 4 to design two PID controllers to balance a ball in the center of a balance beam
- Built a testing setup equipped with drone motors, electronic speed controllers, and an inertial measurement unit
- Wrote code in C++ to apply PID controllers to the unstable physical system

SKILLS

Robotics: ROS/ROS2, Control Systems, Embedded Systems, MoveIt, Nav2, OpenCV, RVIZ, Gazebo

Software: C++, Python, C, Java, MATLAB/Simulink, LabVIEW, Linux, Git, CMake, Unit Testing

Hardware: SolidWorks/Inventor/NX/Onshape, Rapid Prototyping, Soldering, Mechatronics, Microcontrollers
